

## Biomedicine Careers Hub update

David Greensmith

The “Biomedicine Careers Hub” I wrote of in the [previous issue](#) continues to grow from strength to strength. The hub (which can be accessed via the “communities” area of Blackboard) is now heavily populated with career-related resources. You will see several activity spaces, each associated with a particular high-level career area:

- Biomedical scientist and pathology lab
- Research-based careers and progression to PhD / Master by Research
- Taught masters
- Teaching
- Graduate entry medicine, dentistry and physician’s associate
- Biotechnology and industry
- Microbiology and public health
- Scientific communication, writing and outreach

Each space is managed by a member of staff who is an expert in the field and are packed full of useful and career-specific resources. Remember, each space represents a considerable breadth of distinct pathways and the list certainly isn’t exhaustive. Indeed, if you feel a certain career group isn’t represented, let us know. On the hub, you will also find general activity spaces which contain career-spanning resources such as career events, placements and CV enhancing opportunities.

Remember, you can use the hub in two ways: (1) to research career options and (2) to make yourself more employable by engaging with the many extra-curricular activities that feature on the site. It’s a highly dynamic resource and will constantly grow and develop with new content so do access it on a regular basis to see what’s new.

The leads of certain career groups have also established parallel Teams sites for further career-specific mentoring and support. To gain access to any of those Teams sites, simply contact the associated academic lead.
